#### THE COMPANY

AEC Illuminazione is a luminaire manufacturer with an approach based on a combination of product quality and environmental responsibility. Today the company is an important example of Italian industrial excellence, known and appreciated all over the world. The company's awareness is such that its every effort is aimed at reducing its impacts towards the environment. This commitment translates into designing increasingly efficient and sustainable products, which therefore go to minimize energy consumption and resource use, promoting new technologies to protect the environment.

### **EPD SCOPE AND TYPE**

This Environmental Product Declaration is of the 'from cradle to grave' type and analyses all phases of the product life cycle, from the extraction of raw materials to the decommissioning and disposal of the product once it has reached the end of its life. As dictated by the PCR itself, the UPSTREAM phases of procurement (A1) and transport of raw materials (A2), the CORE phase of internal production (A3), the DOWNSTREAM phases of distribution (A4 - A5), use (B1 - B7), end-of-life of the product (C1-C4) and the resource recovery phase (D) were considered for the evaluation.

| P                        | Production             | on Stage       |            | Distribution Stage End-of-life Stage |     |             |        |             | Resource       |            |           |             |           |                   |                  |                                      |

Legend: X = included in the LCA, MND = the module is not included in the LCA and is not declared.

#### LCA GENERAL INFORMATIONS

Product EPD EPD type System boundaries From Cradle to grave and benefits beyond product life cycle. **Declared unit** The declared unit taken into consideration is a single street luminaire belonging to the FALKO 1 and FALKO 3 series respectively, operating during a reference life of 40,000 operating hours in accordance with Sub PCR 020 "Electronic and electrical products and systems - Home appliances". **Temporal validity** The reference period is the calendar year 2024. Geographical The performances have been calculated with reference to the main plant of AEC validity Illuminazione S.r.l. in via A. Righi, n.4 Subbiano, Arezzo - 52010 (IT) and the Pole Division branch in Via E. Fermi, 93 - Z.I. Castelnuovo - 52010 - Subbiano, Arezzo (IT). The reference market is the global one. Database used Ecoinvent 3.9.1 LCA software SimaPro 9.5.0.1 M-LCA-018-Tool AEC 00, 16/12/24 **LCA Tool Exclusion criteria** They were excluded from the following study: employee travel. the packaging of the auxiliary material. replacement parts for machinery used during routine and extraordinary maintenance. **Data quality** All data related to the company's CORE activities and therefore falling under A3, were derived directly from the company's databases and are therefore site-specific. The UPSTREAM data, linked to phases A1 and A2 (for which the standard envisages the use of generic data), the data relating to weight, quantity, raw materials, and waste are derived from the company's databases or from reprocessing supplied directly and summarised in a 'Data Collection Checklist' and are therefore to be understood as site-specific. Generic data Criteria were applied throughout the analysis: geographical equivalence, considering similar Italian or at most European systems. technological equivalence, considering comparable technological systems through literature research. equivalence with respect to system boundaries, considering systems that take similar inputs, outputs and stages. Site-specific data refer to the year 2024, while for generic data, information between 2010 and 2020 was considered. **Cut-off rules** As stipulated in EN 15804:2012 + A2:2019, the cut-off criterion must be a maximum of: 1% of the total mass of each process unit.

- 1% on the use of primary energy from renewable and non-renewable sources, and
- 5% on the total flows for each unit (both in terms of energy and mass).

The following inputs were cut-off in this study:

Data validation

Galvanising treatment carried out on hardware, small parts and bolts.

The check of the validity and correctness of the specific data used for the CORE phases (phases A2 and A3) supplied by AEC Illuminazione S.r.l. was carried out through the punctual verification of the mass balances and the plant authorisation documentation, as well as the critical consultation of other EPD studies produced in compliance with the reference PCR.

About the generic data used for the UPSTRESAM (A1) and DOWNSTREAM (C1, C2, C3, C4) phases, on the other hand, reference was made to the validation models required in Annex E of standard EN 15804:2012 + A2:2019.

#### PRODUCT DESCRIPTION

#### CHARACTERISTICS

#### **FALKO Series**

#### **DIMENSIONS**

#### **PRODUCT DESCRIPTION**

FALKO Series luminaires consist of:

Aluminium housing, LED modules, LED driver, optical modules for light distribution, electrical cables, connectors, SPDs (optional), screws and whatever else is needed for correct electrical connection and installation.

#### **ELECTRICAL AND MECHANICAL CHARACTERISTICS**

| Luminaire:                     | Power:       | Weight:       |
|--------------------------------|--------------|---------------|
| FALKO 1 3P3 XX-XXX YYZZ.060-1M | 7.7 W        | <b>3.7</b> kg |
| FALKO 1 3P3 XX-XXX YYZZ.200-1M | 23.8 W       | <b>3.8</b> kg |
| FALKO 3 3P3 XX-XXX YYZZ.070-4M | 31.8 W       | <b>8.6</b> kg |
| FALKO 3 3P3 XX-XXX YYZZ.180-6M | <b>119</b> W | <b>9.5</b> kg |
| D                              |              |               |

Rated voltage: 220÷240V. Rated frequency: 50/60Hz.

**040** ÷ **200**: LED current range (mA).

#### **LED MODULE**

1M ÷ 6M: number of LED module.

#### **AVAILABLE OPTICS** (XX-XXX)

| SP-S15 | Symmetrical optics for narrow- |
|--------|--------------------------------|
|        | beam architectural lighting.   |

SP-WW60

Symmetrical optics for architectural lighting extra-wide beam.

SP-M25 Symmetrical optics for mediumbeam architectural lighting.

EL-15-60

Symmetrical optics for architectural lighting elliptical horizontal/vertical beam.

**SP-W40** 

Symmetrical optics for widebeam architectural lighting.

EL-60-15

Symmetrical optics for architectural lighting elliptical horizontal/vertical beam.

N.B. other optics available on request.

**N.B.** The components indicated in the material balance table and their weight percentages may be subject to change if configurations other than those indicated are considered.

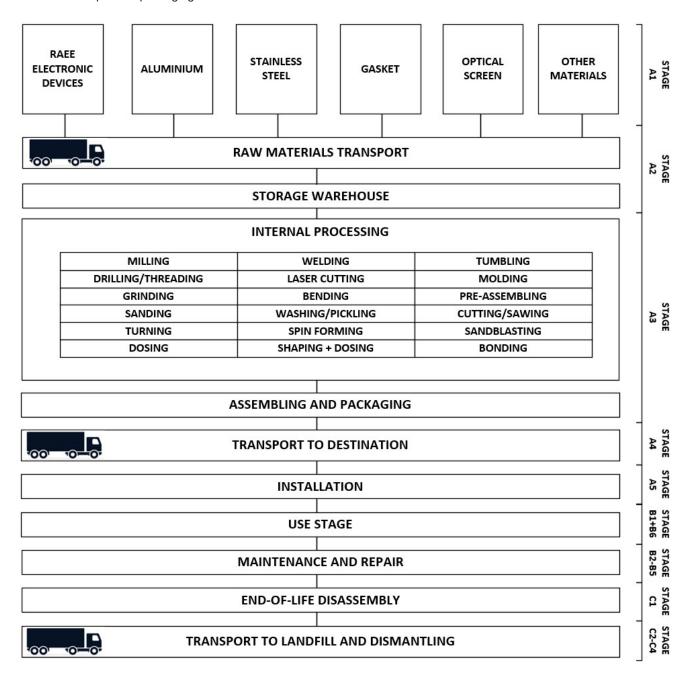

#### DESCRIPTION OF THE PRODUCTION PROCESS

The reality of AEC Illuminazione S.r.l. is highly technological thanks to the investments made in recent years in brand new machinery, collaborative robots, automated plants, and digital data transmission technologies, guaranteeing greater production efficiency and industrial competitiveness.

The design and production processes take place within the company headquarters and begin with the receipt of raw materials (metals) and semi-finished products (electrical and electronic components, glass, and crystal), which undergo quality control before being stored in the automated warehouse.

The production of an appliance is made up of various internal and external phases at subcontractors, in particular, the internal phases include:

- Production processes of cast iron components.
- Production processes of steel and aluminium components.
- Pre-assembly of components and assembly of the finished product.
- Testing: safety and functionality tests of the luminaire.
- Finished product packaging.

### **SCENARIOS**

| MODULES                 | SCENARIOS USED  |
|-------------------------|---|
| Production Stage        | <b>A2.Transport of raw materials.</b> For the component transport phase, the distances and relative quantities transported from the production site to the AEC Illuminazione S.r.l. factory were considered. For the calculation of distances by road, the distance between the company headquarters and the address of the various suppliers was used. For air and sea routes, the Ecotransit website (https://www.ecotransit.org/en/) was used instead.   |
| Distribution Stage      | <b>A4.Transport.</b> For the distribution phase, a distance of <b>832 km</b> by road and <b>1271 km</b> by ship was considered based on a weighted average of the countries of installation during the reference year.  |
| Installation Stage      | A5.Installation process. For the installation of the luminaires, the use of a diesel lifting platform was considered for a time of 20 min, considering both the movement of the vehicle and the actual installation time of the luminaire. For fixing the luminaire to the pole, on the other hand, the use of an electric screwdriver was considered.  During the installation phase, the disposal of the final packaging materials is considered by identifying a disposal scenario in European and non-European territory, based on the weighted average of the devices sold by AEC during the reference year. |
| Use Stage               | B1.Use. This phase has already been accounted for in B6.  |
| -                       | <b>B2.Maintenance.</b> No ordinary maintenance of the product by the company was considered during its useful life.   |
|                         | <b>B3.Repair.</b> Routine repairs of the product during its useful life are not considered. The operations relating to the LED power supply were accounted for in phase B4.   |
|                         | <b>B4.Replacement.</b> It's planned to replace LED driver at a rate of 4% based on the respective failure rates defined in the data sheets.   |
|                         | <b>B5.Rehabilitation.</b> Rehabilitation operations of the product or its components by the company during its useful life are not considered.  |
|                         | <b>B6.Energy used.</b> During the use phase the devices are powered by low voltage electricity. As indicated in the reference PCR 020 Sub-category, a Reference Life Service (RLS) of 40,000h and the nominal power of the appliance are considered. The energy mix considered for the consumption analysis is a weighted average of the countries of installation for the reference year, with an effective value equal to <b>0.432 kgCO2/kWh</b> . The input data used comes from the Ecoinvent 3.9.1 database.   |
|                         | <b>B7.Water used.</b> No water consumption is expected from the product during its lifetime.  |
| End-of-life Stage       | <b>C1.Disassembly.</b> For the disassembly phase, the same impacts were considered as for the installation phase (operation of the diesel lifting platform and electric screwdriver).   |
|                         | <b>C2.Transport.</b> For the transport phase of the equipment to specialised treatment plants, reference was made to a precautionary default average distance of 100 km.  |
|                         | <b>C3.Recycling Processes.</b> For all information related to the treatment process of end-of-life appliances, reference has been made to Table G.4 in Annex G of EN 50693:2019.  |
|                         | <b>C4.Disposal processes.</b> For disposal processes, as for the previous paragraph, reference has been made to the same Annex G of EN 50693:2019.  |
| Resource recovery Stage | <b>D. Re-use, recovery, recycling potential.</b> They were considered the C3 phase waste flows sent for recycling as recovered materials matter.  |

#### **FALKO 1 RESULTS**

The following tables summarize the total environmental impacts calculated through AEC Illuminazione proprietary LCA-Tool for the FALKO 1 street luminaire.

Size: FALKO 1 3P3 XX-XXX YYZZ.060-1M

#### Main Environmental Impact Indicators - Results per declared unit

| Indicator           | Unit of measure | Manufactu | ring Stage | Distribution<br>Stage | Installation<br>Stage | Use Stage | End-of-life<br>Stage | Resource<br>recovery<br>stage |

#### **ACRONYMES**

**GWP-Fossil** = One Hundred Year Global Warming Potential - Fossil. **GWP-Biogenic** = One Hundred Year Global Warming Potential - Biogenic. **GWP-Land use** = One Hundred Year global warming potential - Land use and land-use change. **ODP** = Ozone Depletion Potential in the stratosphere. **AP** = Acidification Potential of Soil and Water. **EP-Freshwater** = Eutrophication potential, for freshwater. **EP-Marine** = Eutrophication potential, for salt water. **EP-Terrestrial** = Terrestrial eutrophication potential. **POCP** = Photochemical Ozone Formation. **ADPE** = Abiotic Non-Fossil Resource Depletion Potential. **ADP-Fossil** = Depletion potential of abiotic fossil resources. **WDP** = Water Deprivation Potential (user), deprivation-weighted water consumption.

**Disclaimer (1) =** This impact category mainly concerns the possible impact of low-dose ionising radiation on humans from the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure, or underground radioactive waste disposal facilities. **Disclaimer (2) =** The results of this environmental impact indicator should be used with caution, as uncertainties about the results are high or experience with the indicator is limited.

#### Additional Environmental Impact Indicators - Results per declared unit

| Indicator             | Unit of measure | Manufactu | ring Stage | Distribution<br>Stage | Installation<br>Stage | Use Stage | End-of-life<br>Stage | Resource<br>recovery<br>stage |

#### **ACRONYMES**

**GWP-Fossil** = One Hundred Year Global Warming Potential - Fossil. **GWP-Biogenic** = One Hundred Year Global Warming Potential - Biogenic. **GWP-Land use** = One Hundred Year global warming potential - Land use and land-use change. **ODP** = Ozone Depletion Potential in the stratosphere. **AP** = Acidification Potential of Soil and Water. **EP-Freshwater** = Eutrophication potential, for freshwater. **EP-Marine** = Eutrophication potential, for salt water. **EP-Terrestrial** = Terrestrial eutrophication potential. **POCP** = Photochemical Ozone Formation. **ADPE** = Abiotic Non-Fossil Resource Depletion Potential. **ADP-Fossil** = Depletion potential of abiotic fossil resources. **WDP** = Water Deprivation Potential (user), deprivation-weighted water consumption.

**Disclaimer (1) =** This impact category mainly concerns the possible impact of low-dose ionising radiation on humans from the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure, or underground radioactive waste disposal facilities. **Disclaimer (2) =** The results of this environmental impact indicator should be used with caution, as uncertainties about the results are high or experience with the indicator is limited.

#### Additional Environmental Impact Indicators - Results per declared unit

#### **ACRONYMES**

**GWP-Fossil** = One Hundred Year Global Warming Potential - Fossil. **GWP-Biogenic** = One Hundred Year Global Warming Potential - Biogenic. **GWP-Land use** = One Hundred Year global warming potential - Land use and land-use change. **ODP** = Ozone Depletion Potential in the stratosphere. **AP** = Acidification Potential of Soil and Water. **EP-Freshwater** = Eutrophication potential, for freshwater. **EP-Marine** = Eutrophication potential, for salt water. **EP-Terrestrial** = Terrestrial eutrophication potential. **POCP** = Photochemical Ozone Formation. **ADPE** = Abiotic Non-Fossil Resource Depletion Potential. **ADP-Fossil** = Depletion potential of abiotic fossil resources. **WDP** = Water Deprivation Potential (user), deprivation-weighted water consumption.

**Disclaimer (1) =** This impact category mainly concerns the possible impact of low-dose ionising radiation on humans from the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure, or underground radioactive waste disposal facilities. **Disclaimer (2) =** The results of this environmental impact indicator should be used with caution, as uncertainties about the results are high or experience with the indicator is limited.

#### Additional Environmental Impact Indicators - Results per declared unit

#### **ACRONYMES**

PERE = Use of renewable primary energy resources excluding primary renewable energy resources used as feedstocks.

PERM = Use of renewable primary energy resources used as feedstocks. PERT = Use of renewable primary energy resources.

PENRE = Use of non-renewable primary energy resources excluding non-renewable primary energy resources used as feedstocks.

PENRM = Use of non-renewable primary energy resources as feedstocks.

PENRT = Use of non-renewable primary energy resources.

SM = Use of secondary materials.

RSF = Use of renewable secondary fuels.

NRSF = Use of non-renewable secondary fuels.

RSF = Use of renewable secondary fuels.

#### Waste generated - Results per declared unit

#### **ACRONYMES**

**GWP-Fossil** = One Hundred Year Global Warming Potential - Fossil. **GWP-Biogenic** = One Hundred Year Global Warming Potential - Biogenic. **GWP-Land use** = One Hundred Year global warming potential - Land use and land-use change. **ODP** = Ozone Depletion Potential in the stratosphere. **AP** = Acidification Potential of Soil and Water. **EP-Freshwater** = Eutrophication potential, for freshwater. **EP-Marine** = Eutrophication potential, for salt water. **EP-Terrestrial** = Terrestrial eutrophication potential. **POCP** = Photochemical Ozone Formation. **ADPE** = Abiotic Non-Fossil Resource Depletion Potential. **ADP-Fossil** = Depletion potential of abiotic fossil resources. **WDP** = Water Deprivation Potential (user), deprivation-weighted water consumption.

**Disclaimer (1) =** This impact category mainly concerns the possible impact of low-dose ionising radiation on humans from the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure, or underground radioactive waste disposal facilities. **Disclaimer (2) =** The results of this environmental impact indicator should be used with caution, as uncertainties about the results are high or experience with the indicator is limited.

#### **ACRONYMES**

PERE = Use of renewable primary energy resources excluding primary renewable energy resources used as feedstocks.

PERM = Use of renewable primary energy resources used as feedstocks. PERT = Use of renewable primary energy resources.

PENRE = Use of non-renewable primary energy resources excluding non-renewable primary energy resources used as feedstocks.

PENRM = Use of non-renewable primary energy resources as feedstocks.

PENRT = Use of non-renewable primary energy resources.

SM = Use of secondary materials.

RSF = Use of renewable secondary fuels.

NRSF = Use of non-renewable secondary fuels.

RSF = Use of renewable secondary fuels.

#### Waste generated - Results per declared unit
